TITLE: Clinical radiologic and endocrine-metabolic changes in gastrectomized patients

SOURCE: Medicinski glasnik, no. 2-3, 1965, 47-51

TOPIC TAGS: digestive system disease, endocrinology, radiology, biologic metabolism

ABSTRACT: Detailed data on 42 hospitalized patients who were gastrectomized with  
gastroenteric anastomosis for peptic ulcers: ages, occupations, duration of symptoms  
before operation, types of postoperative symptoms and complaints, roentgenologic  
findings and laboratory data, including glycemia, calcemia, urinary 17-ketosteroids  
and response to ACTH. This paper was read at the Congress of Yugoslavian Interns in  
Sarajevo in 1964. Orig. art. has: 3 figures and 8 tables. [JPRS]

Title : The Use of Food Supplements In Enzootic Ataxia of Lambs.

Orig Pub: Tr. Dagestansk. S. Kh. In-ta, 1956, 8, 41-47

Abstract: The addition of fish fats, chalk, and bone meal to the ration of lambs with enzootic ataxia showed no healing effect. The administration of copper sulfate to lambs, with the severe form of the disease, produced no positive results. The results of some physiological and biochemical investigations are given and also the blood analysis of the ill lambs is cited.

Title : On the Methods of Selecting Sports in Grape Plants.

Orig Pub : Vinodeliye i vinogradarstvo, SSSR, 1956 n No 8, 27-31

Abstract : This article discusses the methods of sport selection in grape plants with reference to the article by P.K. Sol-datov (Wine Making and Viticulture of USSR, 1956, No 7) which expresses the opinion that the high productivity of the individual grape plants is not a hereditary characteristic and is not reproduced in vegetative propagation if these plants do not differ from the ordinary ones with regard to the morphological and biological characteristics. As opposed to this, it is stated that the hereditary vegetative variability may have the nature of profound and hereditary changes in the area of biological

functions (resistance to unfavorable conditions, etc.) which are not accompanied by changes in the characteristics of the vegetative organs. Abrupt and lasting biological changes can occur with the full preservation of the morphological peculiarities of the variety, and vice-versa, some morphological characteristic can change without any change in the biology. For example, in the case of the early variety Pinot (Ischia), the berries ripen 20-25 days earlier than in the original Pinot Noir, but both varieties are completely undistinguishable in regard to the morphological characteristics. The All-Russian Scientific Research Institute of Viticulture developed a late blossoming variation of the Gars Levelyu variety, but it did not succeed in determining clear, morphological differences by which this sport could be separated in plantings. For a more accurate evaluation of the separated plants in sport selection, it is

necessary to determine the coefficient of fruit bearing, the percentage of fruit bearing shoots, the average weight of the cluster - all of which fully reflect the hereditary fruit bearing ability of the grape plants. -- Ye.T. Zhukovskaya

 TITLE : Grape Assortment for Irrigated Zone of the Dono-Tsimlyanskiy Water-Power System.  
 ORIG. PUB. : V. oim. s. -kh. Mosk., 1957, No. 3, 56-62  
 ABSTRACT : The land range of the Dono-Tsimlyanskiy water-power system is divided into three subzones: the zone at the Don river, the subzone of elevated slopes beyond the Don and the eastern subzone. The subzone near the Don, most favorable in soil and climatic conditions for grape-growing, is a plain with southern chernozems, that extends along the Don river valley. Planned here is the cultivation of vineyards for the production of cognacs, non-alcoholic juices and table sorts of all periods of

ripening. The subzone assortment includes 15 sorts. The elevated steppe subzone beyond the Don can be a raw material base for development of quality wine-making, since the technical sorts grown here produce good wines of various types. The production of semi-dessert and strong wines is possible. The cultivation of late-maturing long-keeping and transportable table sorts, including Central Asian varieties, is expedient on substantial scales. The assortment includes 34 varieties, 13 table among
